

How I Stacked It

Michael Rodgers
Head of Financial Control
at Behavox

Mayday

Intercompany

“Before implementing Mayday, transfer pricing recharges and intercompany revaluations were too time-consuming to complete monthly, so we only performed them at year-end. Mayday has completely streamlined this process, enabling us to handle these tasks monthly with minimal effort. Additionally, the Balancer tool simplifies reconciling intercompany accounts by easily identifying missing postings, saving considerable time that would otherwise be spent on manual reconciliations.”

UK Payroll / AP Payments

“Nook has been incredibly useful for our UK payments. Its automatic import of Xero payroll data and one-click payment feature saves us significant time compared to manual bank transfers. For AP, Nook simplifies supplier payments by showing invoices directly in the system and automatically reconciling payments with Xero, which has drastically reduced the time our management accountants spend on manual reconciliations.”

Consolidation

“Joiin has been a valuable tool for consolidated reporting. It allows us to drill down into multi-entity transactional data, which has been beneficial for both the FP&A team and the financial control team. The ability to set exchange rates by TB code is a significant improvement over our previous system, Fathom, especially for equity translations at historical rates. However, we’re still hoping to see full automation for consolidating equity at historical rates.”

4

Credit Cards

"We use Spendesk for virtual credit cards in the UK and US, helping us efficiently manage subscriptions and travel expenses without manual reconciliations. However, Spendesk doesn't currently cover Canada, so we use Float, which offers similar functionality and seems to be the best product available in Canada. Ideally, we would like a single provider to cover all our entities globally."

5

US Payroll

"Justworks is an intuitive, user-friendly payroll system for our US employees. Its seamless integration with Xero saves us time by automatically posting payroll journals, and splitting expenses by department and category."

Employee Expenses

“With many employees travelling for business, we needed a more robust expense management solution than our previous manual process in Jira. Expensify has been a game changer, significantly improving the experience for both employees and the finance team. Its ability to issue reimbursements directly within the system across all our locations has been invaluable.”
