

How I Stacked It

Carl White
CFO at Genflow

Intercompany

*“With multiple entities in the group, our finance team was spending a significant amount of time reconciling intercompany balances and manually matching transactions within each entity. **Mayday** has streamlined this process, greatly reducing the time burden and making reconciliation much easier.”*

Software spend

*“We chose **Cledara** because it gives budget holders clear visibility into spending, provides structured approval steps, and simplifies month-to-month expense management with card spending limits. As an added benefit, the cashback reward on spending allows us to use Cledara at no cost.”*

HR

*“With **HiBob**, we wanted software that could support our growth and scaling efforts, streamline onboarding, assist with data collection for payroll, and improve the onboarding and review processes for new team members.”*

4

Payroll

*“**Pento** has streamlined our payroll by automating processes and syncing employee data, greatly reducing manual entry and minimising errors each pay run. Previously, we outsourced payroll, which required early-month reporting deadlines that sometimes caused challenges for the team. With Pento, payroll can now be managed much closer to payday.”*

Payhawk

Spend Management

*“**Payhawk** helps us manage company expenses in the UK by allowing team members to request spending with an approval step for all business expenses. It captures spend details and receipts and reconciles everything automatically with Xero. Previously, the finance team had to chase receipts and manually enter data into Xero. Payhawk’s cashback reward structure also offsets the monthly software cost, making it a highly cost-effective solution.”*

Consolidation

*“We’re currently trialling **Syft** to see if it can replace Excel for our monthly consolidation and reporting. With multiple entities in the Genflow group and reporting done in GBP, Excel can be both time-consuming and error-prone.”*
